Attachment A

Description of Premises

b6
b7C

ATTACHMENT B

ITEMS TO BE SEIZED

1. The following records, documents and materials; ~~constituting evidence of a violation of Title 18 U.S.C. §§ 1029 and 1030 and/or contraband or fruits of a crime shall be seized:~~ (P2)

a. Records, documents, programs, applications and materials which reflect hacking activities, including copies of stolen DEM software; copies of other stolen military, governmental, or commercial software, data, and information; "hacking" tools and programs; lists of usernames; passwords; credit card numbers; computerized logs; account names; personal telephone books; personal address books; exploits and other hacking programs; videotape of May 20, 1998 and May 26, 1998 C.B.S. Evening News interviews; and documents retrieved from the trash receptacles of computer companies;

b. Computing or data processing literature, including printed copy, instruction books, papers, or listed computer programs in whole or in part;

c. Computers; central processing units; external and internal drives; external and internal storage equipment or media; terminals or video display units; computer software; computerized data storage devices, including data stored on hard disks or floppy disks, computer printouts, and computer programs; computer or data processing software or data including: hard disks, floppy disks, cassette tapes, video cassette tapes and magnetic tapes, together with peripheral equipment such as

keyboards, printers, modems or acoustic couplers, automatic dialers, speed dialers, programmable telephone dialing or signaling devices, telephone blue boxes, and magnetic tapes which could contain or be used to transmit or store any of the foregoing records, documents and materials;

d. Indicia of occupancy, including: bills, letters, invoices, ~~personal effects~~, and rental agreements tending to show ownership, occupancy, or control of the premises or the above-described items; and

b6
b7C

e. Records, documents and materials which refer, relate to, or are for use in, computer hacking. As used herein, the terms records, documents and materials includes records and documents created, modified or stored in electronic or magnetic form and any data, image, or information that is capable of being read or interpreted by a computer.

2. In order to search for any items to be seized that were prepared, modified, or stored in electronic or magnetic form, searching agents may seize and search the following:

a. Any computer hardware or computer-related equipment capable of creating or storing information in electronic or magnetic form;

b. Any computer peripheral used to facilitate the transmission, creation, display, encoding or storage of information, images and data including word processing equipment, modems, monitors, printers, plotters, encryption circuit boards, optical scanners;

c. Any magnetic or electronic storage device such as floppy diskettes, hard disks, backup tapes, CD-ROMs, optical discs, printer buffers, smart cards, memory calculators, electronic dialers, Bernoulli drives, or electronic notebooks;

d. Computer software, documentation, operating logs and instruction manuals relating to the operation of the computer hardware and software to be searched;

e. Application software, utility programs, compilers, interpreters, and other programs or software used to facilitate direct or indirect communication with the computer hardware and software to be searched;

f. Any physical keys, encryption devices and similar physical items that are necessary to gain access to the computers to be searched or are necessary to gain access to the programs, data, and information contained on the computer to be searched;

g. Any passwords, password files, test keys, encryption codes or other computer codes necessary to access the computers to be searched or to convert any data, file or information on the computers into a readable form;

h. Electronically stored communications or messages, including any of the items to be seized that may be found in electronic mail ("e-mail").

~~3. Pursuant to Rule 41(b) of the Federal Rules of Crimina~~ Procedure, searching agents ~~shall also~~ seize any computers or computer peripherals, including computer hardware or computer-~~related equipment capable of creating or storing information in~~

b6
b7C

~~electronic or magnetic form, which constitute property used in~~ [redacted] b6 b7C the commission of a crime. Such computer equipment shall include central processing units; external and internal drives; external and internal storage equipment or media; terminals or video display units. Such computer peripherals shall include keyboards, printers, modems or acoustic couplers, automatic dialers, speed dialers, programmable telephone dialing or ~~signaling devices, and telephone blue boxes.~~

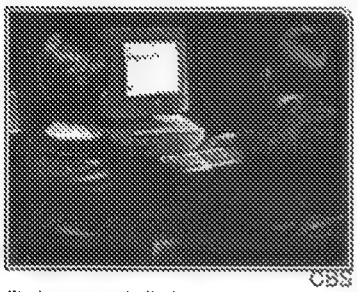
CBS EVENING NEWS

Beyond The Broadcast

- *An Interview With MOD Hackers*
- *CBS News Correspondent David Martin Reports*

Tuesday, May 26,1998 - 05:07 PM ET



CBS

Sniper and Solar

"I think they'd have a hell of a day if you took out a satellite and stuff that they're using to, you know, look at Iraq or something like that."
Sniper, a member of MOD

(CBS) *An international group of hackers that calls itself the Masters of Downloading [or MOD] claims to have hacked a Defense Department computer network and stolen software that tracks military satellites.*

But the group's members say it's just the thrill of the hunt that compels them to break into government computers, not ill will. They say they're careful not to damage the networks they hack or sell software or data they acquire. But they could. And the group's exploits have put the government on notice.

Click Here

CBS News Correspondent David Martin interviewed two 17-year-old members of the group. The teens asked to have their real identities concealed. As hackers, they go by the names Sniper and Solar.

CBS News: So what is MOD? What does it stand for and what does it do?
Sniper: Masters of Downloading. It's kind of a joke name really, but we mostly are just trying to show that the networks and everybody that they think is so secure is not really that secure at all. And they say that there's no classified information on the Internet and that's how it's supposed to be, but that's not true.

CBS News: How big are the Masters of Downloading. How many members do you have?
Sniper: About 15.

CBS News: And they're all in this area? Whe
Sniper: No, they're all over the country.
Solar: Spread around the world.

b6
b7C

b3
b6
b7C
b7E

JUN 0 1 1998

CBS News: Are you a good student in school?
Sniper: No, I'm not in school currently.

CBS News: So you're a dropout? A high school dropout?
Sniper: Yeah. I'm lingering.

CBS News: Lingering?
Sniper: I'm not sure yet what I'm going to do—taking a break, basically.
Solar: [Who has been in college for a year.] High school's just a punishment for being a teenager. [Laugh] I know I guess it teaches you the basic skills of history and math. But other than that, when it's computer related, we have to go elsewhere to get that information.

CBS News: How many other people like you do you think are out there?
Sniper: A lot. [Laugh] Hundreds. There's a lot of people that hack all the time.

CBS News: Is this a cyber-gang?
Sniper: No, not like a gang in the context most people think of. Most people think of a gang, and they think of like violence and killing and all the crazy things like that, but . . .
Solar: We just sit at our computers and use our phone lines to get into systems.

CBS News: And steal. You use the word steal.
Sniper: Yeah.

CBS News: You steal?
Solar: Yeah, you could call it stealing. It's not bad. We're not going into a store and taking something that's worth of value.
Solar: It's not a physical threat. I guess it could be a physical threat if you maybe hacked into a medical office and deleted some records but just going in and looking around and leaving . . .

CBS News: Well don't you think most people would feel like they had been violated if you did that to their house?
Both: Yeah.
Sniper: I mean I'd feel violated

CBS News: Tell me some of the things you've found.
Sniper: There's a lot of different stuff. From like kinky e-mails to, like um, you know, documents saying what time people are coming into work and how much different people in the military, from different sections, how much they get paid. You know, payroll type stuff.
Solar: You can download their home security systems and tweak them and insert some type of a backdoor. You know a Trojan horse.

CBS News: If you wanted to do harm, what could you do?

Sniper: I mean, everything's on the computer. I mean, you could name something and you could probably make it happen.
Solar: You can delete a lot of their files.
Sniper: Yeah, you could take out vital computers that they need and . . . like a lot of satellite uplinks and stuff like that. I think they'd have a hell of a day if you took out a satellite and stuff that they're using to, you know, look at Iraq or something like that.

CBS News: And you think you could take out the ground station for a satellite?
Sniper: Probably. I mean, most satellites are controlled from some type of computer.

CBS News: But those are probably classified, right?
Sniper: I guess, but . . .
Solar: Depends.
Sniper: It doesn't matter. Just because something's classified doesn't mean you can't get into it.

CBS News: Have you ever gotten into a classified computer?
Sniper: No comment.

CBS News: No comment. Really?
Sniper: Yeah.

CBS News: Why is that different from talking about unclassified?
Sniper: I don't know. The government gets really touchy about classified stuff, and they're already looking. We don't need to up the ante.

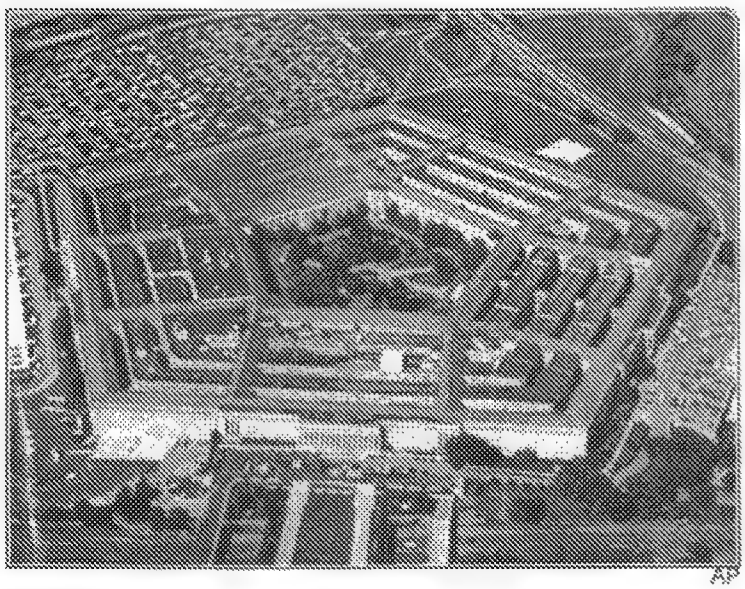
A Hack In The Military's Armor

- *President Briefed On Pentagon Hack Attack*
- *Hackers Say Pentagon Hacked All The Time*
- *CBS News Correspondent David Martin Reports*



AP

"The Pentagon gets hacked all the time."
A hacker with the group Masters of Downloading.

WASHINGTON
Friday, May 22,1998 - 05:37 PM ET

(CBS) It was a secret at the time, but just as the U.S. was about to launch cruise missiles against Saddam Hussein last February, the Pentagon was hit by a different kind of attack.

VIDEO
CBS News Correspondent David Martin Reports On The New National Threat

"Many of our computers were suddenly being hit by some unknown outsider," says Deputy Secretary of Defense John Hamre.

In a coordinated attack, computers all over the world were being programmed to illegally sign on to the Pentagon network. And, not knowing who was behind it, Hamre alerted the President to a nightmare scenario: Saddam might have launched an electronic sneak attack on defense computers.

HACK ATTACK
Click Here

"We set up a crisis coordination team here in the Pentagon, and at one point I briefed the President to tell him that it was underway," Hamre says. **"We didn't know the origin of the attack at that time, but we told him it was underway and [redacted] steps to protect ourselves."**

b7E

[redacted]

JUN 6 - 1998

[redacted]

Deputy Secretary of Defense John Hamre (CBS)

The infiltration of the Pentagon's computers was first spotted by an Air Force intelligence team in Texas, where information warriors stand round the clock watching for attempts to hack into the system. But according to Col. J.C. Massaro, who is the commander of these cyber-soldiers, this was no ordinary hack job.

"What made this different was the amount of computers they were going after," Massaro says. He adds that he had never seen anything like it.

"They wouldn't go away," he says. **"It kept happening and kept happening."**

Bill Zane watched the attack unfold as it came through his Internet relay station in Santa Rosa, California. **"They were attacking machines all over the world...there were on the order of 750 machines ultimately."**

(CBS)

All these machines, Zane adds, the hackers inevitably were able to break into.

The machines were all unclassified. But for a military that uses computers to track every spare part and every soldier being sent to the Persian Gulf, an electronic attack can do more damage than enemy fire.

"If they were able to get into a computer that, for example, affected our schedules for airplanes to take off and what kind of cargo was on board, it could dramatically affect your ability to mobilize," Hamre says.

The FBI was brought in, but it took weeks to trace the attack back to, of all places, the California wine country and two 11th graders.

"It's pretty frustrating that two 16-year-old kids can put us through such enormous efforts to protect our systems," Hamre says.

They're under investigation and not talking, but another teenager, John Vranesevich, who communicates with hackers over the Internet, interviewed one of them online.

"He says it's power, dude. You know, power. I'm 16 years old sitting in my living room, and I can gain access to hundreds of military computers," Vranesevich says.

If two teenagers in high school can, by the Pentagon's own admission, tie it in knots, what does that say about how vulnerable the U.S. military is to cyber attack?

Two 17-year-olds who are members of a hacker network called the Masters of Downloading say it happens all the time. To them, the California hackers did nothing special.

"The Pentagon gets hacked all the time," one of them says. **"It was just a common exploit, you know, anybody could do it. We could show you how to do it in like five minutes, and you could hack a bunch of government stuff."**

The formula the California hackers used is still right there on the Internet.

"In about 30 seconds you could come here and download this," the same hacker says.

In the hands of a hacker with evil intent, that could spell disaster.

"He has the power to wipe you out literally in less than 60 seconds," Zane says. **"He can issue commands in less than 60 seconds that will leave you with nothing but a blank screen and nothing on your hard drives and nothing in your system. Gone. Smoking ruins."**

The Pentagon's anti-hacker squads have become the frontline troops in the information age, searching out the hackers byte by byte, shoring up what has suddenly been exposed as perhaps the weakest link in this country's defenses.

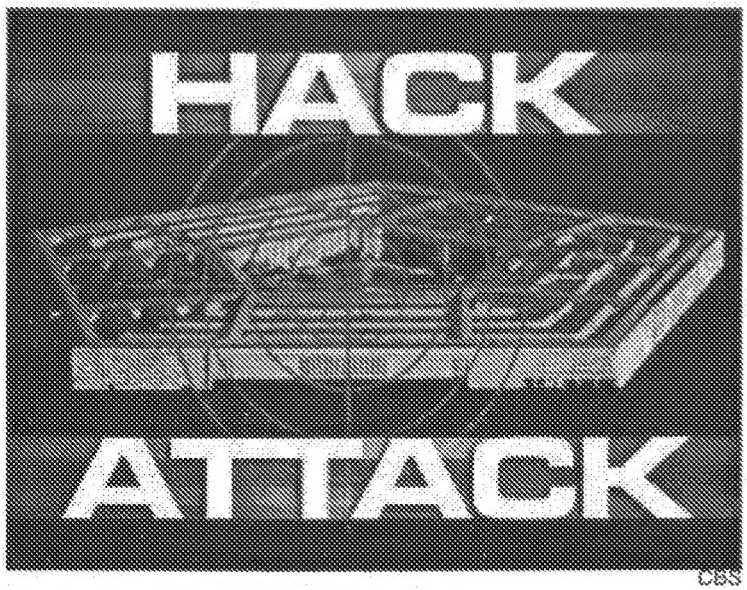
ORACLE

CBS EVENING NEWS

The New National Threat . . .



CBS

Tuesday, May 26,1998 - 07:04 PM ET

(CBS)
The government is learning some hard lessons about national security—not from intelligence agencies or foreign governments, but from hackers. These computer whizzes most known for breaking into corporate computer networks are now showing that the government's computers are prime targets, too.

Click Here

The Pentagon and Capitol have both been recent targets for hackers. The hackers say they've successfully breached these computers, and the evidence backs them up. In a recent attack on the Pentagon, government officials admit security breaches on as many as 750 military computers.
